

# CORROSIONX<sup>HD</sup>

HEAVY DUTY

For those really tough jobs, like those involving direct exposure to rain, snow or seawater, use CorrosionX Heavy Duty. It's a high-performance, thick-film version of CorrosionX providing maximum protection against serious rust and corrosion. There is simply no other product like it!

## WHAT IT DOES

CorrosionX Heavy Duty forms a dripless, non-hardening, self-healing film that stubbornly resists removal – even by complete immersion in salt-water. CorrosionX Heavy Duty slowly penetrates existing rust and corrosion, removes moisture, then seals the moisture out.

Field & Stream magazine editor Bob Sterns, considers it a must for boat trailers:

***“An annual coating of CorrosionX Heavy Duty will help protect the leaf springs from rusting. This coating will also help protect the trailer frame and ensure easy removal of nuts and bolts.”***

## HOW IT WORKS

Unlike wax coatings, its non-hardening film will not dry out, stiffen or crack. Under stress, it bends as the metal surface flexes or twists beneath it. It won't wash off even after being submerged in water for hours.

## LONG-LASTING

CorrosionX Heavy Duty will still be there long after other products have disappeared. And, it will protect your equipment and save you money more effectively than anything else.

## MORE GREAT CORROSIONX<sup>®</sup> PRODUCTS

Starting with the CorrosionX formula, we've added exotic ingredients to optimize CorrosionX for these specific uses:

### REELX<sup>®</sup>

The ultimate lubricant for fishing reels and the choice of top reel manufacturers worldwide. ReelX provides the same corrosion protection as CorrosionX while keeping reels optimally lubricated for longer, smoother casts.

### SPEEDX<sup>®</sup>

SpeedX takes the science of lubrication to a whole new level! SpeedX penetrates into metal and chemically reacts with wear surfaces whenever heat from friction is present. This modified surface is both very smooth and has an ultra-low coefficient of friction. SpeedX excels under heavy loads and high temperatures, so it's ideal for inline skates, skateboards, precision equipment and applications where any friction is too much.

### CORROSIONX<sup>®</sup> FOR GUNS

Our customers asked for a special CorrosionX applicator for their firearms, and now they have it. CorrosionX for Guns comes in a 4 oz. applicator-tip bottle that allows pinpoint treatment of specific lubrication points. It cuts through stubborn bore deposits for easier, more thorough cleaning, and it decreases fouling even after hundreds of rounds. The product outperforms and outlasts other lubricants, making it ideal for semiautomatics.

## GUARANTEE

**If you're not convinced that it does everything we say, we'll give you your money back. NO IFs, ANDs OR BUTs!**

## The 'Can-Do' Can

### STOPS RUST AND CORROSION FOR GOOD

In controlling rust and corrosion, the traditional approach has been to cover metal surfaces with a barrier coating such as paint, wax or oil. It's a good theory in principle (and until now, there weren't many other options), but there are major drawbacks. Barrier coatings can't do much besides keeping moisture off the metal surface thereby slowing the corrosion process – that's why they're called 'corrosion inhibitors'.

Unfortunately, moisture inevitably displaces or penetrates through barrier coatings allowing it to contact the metal that's supposedly being protected. Once this happens, barrier coatings tend to lock in moisture and corrosion can grow unchecked.

CorrosionX uses a revolutionary technology that causes the product to stick to metal almost like a magnet. This **Polar Bonding** technology puts CorrosionX's effectiveness light-years ahead of the competition. Because CorrosionX is attracted to

metal, it displaces moisture and other electrolytes that accelerate the corrosion process – even saltwater. Then, it leaves an ultra-thin, self-healing film that actively seals metal from the environment.

**This unique ability makes CorrosionX more than just a 'corrosion inhibitor'; it's a true corrosion stopper.**

With regular application, CorrosionX has proven to be unmatched in controlling corrosion even under the most extreme conditions.

### LUBRICATES

Without adequate lubrication, wear surfaces grind together creating friction. CorrosionX stays bonded in place and wear surfaces are separated by a super slick, protective coating, so friction and wear are dramatically reduced.

### PENETRATES

The attraction between metal and CorrosionX is so strong that CorrosionX molecules 'leapfrog' each other in order to contact clean metal – defying gravity and penetrating through rust and corrosion. This is why CorrosionX penetrates faster and further than any other penetrant.

### ELECTRONICS SAFE

CorrosionX won't short sensitive circuits or interfere with electrical connections. CorrosionX displaces moisture and existing corrosion, cleans contact points and improves connectivity – often restoring electronics that have been damaged by environmental exposure.

## THOUSANDS OF USES

### Marine

- Powerdrives, engines, generators and A/C units
- Throttle cable and steering mechanism
- Winches, furling systems, windlass, cleats, hatches, stanchions, downriggers and all other deck hardware
- Battery terminals, wiring harnesses, circuit breakers, fuse holders
- Instrument and ignition switches
- Often restores electronic gear exposed to moisture, including electric motors, radios, radar and GPS

### Industrial

- Bearings and bushings, pulleys, winches and rolling stock
- Air tools and power tools
- Stuck valves
- Wire rope and cable, including brake and throttle cables
- Electric motors, pumps, alternators and starters
- Switches, breaker and fuse holders

### Household, Lawn & Garden

- Locks, hinges, door and window slides
- Tools
- Garage door opener, casters and tracks
- Fans
- A/C units

### Automotive

- Unpainted metal parts
- Frame and body
- Lugs, nuts and bolts
- Battery terminals

### Sporting Equipment

- Bearings
- Fishing reels
- Firearms and hunting gear
